UNITS WITHOUT A FAN BUT WITH A RANGE OF CLEANING AND DISINFECTION TECHNOLOGIES

MF

Filter units without a fan but offering various filter options

MCA

Filter units without a fan but with activated carbon filter cartridges

MPCO

Filter units without a fan but with technology based on photocatalysis

MFE

Filter units without a fan but with high efficiency electrostatic filters

MF

Filter units without a fan but offering various filter options

Filter units without a fan but offering various filter options, designed to clean air by trapping airborne particulate matter present inside buildings.

Characteristics:

- Aluminium profile structure.
- High quality, 25 mm thick acoustically insulated casing made from prefinished sheet.
- Side panel for maintenance access.
- Modular construction for use in combination with different air treatment units.
- Compatible with most existing aluminium profile type models: CJK/EC, CJK/FILTER/EC, UPC/EC, CJBX/AL, CJB/AL, CJDXR/AL, UFRX/ALS...
- Filtration stages options:
 - G4 + F7.
 - F6 + F8.
 - F7 + F9.
- Easy to remove filters for cleaning and maintenance.

ACTIVATED CARBON FILTERS

Activated carbon filters are specifically designed for treating large air flows while minimising load loss.

These filters are easy to install and are rechargeable.

Activated carbon filter technology is ideal for removing undesired pollutants, trapping odours, gases and allergens. They are also recommended for purifying pollutants generated by general use and occupation of premises.

RECOMMENDED FOR

- Commercial kitchens
- Airports
- Hospitals
- Agri-food industry
- Fast food restaurants

HOW DOES IT WORK?

Activated carbon filter technology in cartridges works by trapping pollutants and odours present in the air that passes through the filter cartridge.

MCA

Filter units without a fan but with activated carbon filter cartridges

Filter units without a fan but with activated carbon filter cartridges, designed for eliminating odours and purifying airborne pollutants.

Characteristics:

- Aluminium profile structure.
- High quality, 25 mm thick acoustically insulated casing made from prefinished sheet.
- Side panel for maintenance access.
- Modular construction for use in combination with different air treatment units.
- Compatible with most existing aluminium profile type models: CJK/EC, CJK/FILTER/EC, UPC/EC, CJBX/AL, CJB/AL, CJD/AL, UFRX/ALS...
- Filters that are rechargeable, corrosion resistant and easy to remove for cleaning and maintenance.

PHOTOCATALYSIS TECHNOLOGY

PCO™ technology (Photocatalytic Oxidation) is a powerful tool that is used for purifying air and nearby surfaces, by accelerating the natural decomposition of organic matter through photocatalysis. Additionally, our equipment has built-in modules with **positive and negative ionisation technology**, which improve their purifying efficacy against ultra-fine dust and odours.

APPLICATIONS

Purifying air by disinfecting it using **PCO technology is ideal for premises where people are continuously entering and exiting**. These premises require a speedy, high efficiency disinfection due to the high rate of pollutants that may be circulating. PCO technology is also suitable for use at locations where there is a need to disinfect large material surfaces through the air.

HOW DOES IT WORK?

PCO technology uses a UVC ultraviolet light source to react with a titanium dioxide catalyst in the presence of humidity/water vapour to create hydroxyl radicals (OH) and hydrogen peroxide (H₂O₂), which inactivate airborne microorganisms and harmful chemical substances circulating in the air.

These devices use PCO technology, together with **positive and negative ionisation**, to gather suspended particulate matter, which has not been collected by filters, and make it harmless.

Positive and negative ionisation of particles

MPCO

Filter units without a fan but with technology based on photocatalysis

Filter units without a fan but with technology based on photocatalysis, especially designed for cleaning, disinfecting and purifying air in indoor spaces as well as material surfaces.

Characteristics:

- Aluminium profile structure.
- High quality, 25 mm thick acoustically insulated casing made from prefinished sheet.
- Side panel for maintenance access.
- Modular construction for use in combination with different air treatment units.
- Compatible with most existing aluminium profile type models: CJK/EC, CJK/FILTER/EC, UPC/EC, CJBX/AL, CJB/AL, CJD/AL, CJD/AL, UFRX/ALS, etc.
- Devices with built-in high-efficiency photocatalysis technology.
- Positive and negative ionisation.
- Filtration stages: F7 + F9.
- Effective up to 40 linear metres of ducting.

MCPO F7+F9 filter modules

MCPO F7+F9 filter modules

ELECTROSTATIC FILTER TECHNOLOGY

Electrostatic filters EF are especially suitable for eliminating polluting substances such as particulate matter, bacteria or volatile organic compounds (VOCs). The high performance of these filters along with their high capacity for capturing particles, results in this equipment operating with a very low load loss and therefore, their energy consumption is very low in comparison with that of conventional mechanical filtering systems.

Air purification by disinfection using **electrostatic filter technology** is ideal for environments where pollutants are suspended particulate matter, oily or greasy or of the type that quickly saturate mechanical or fabric filters. Electrostatic filters are washable and easy to maintain.

HOW DOES IT WORK?

Particulate matter is ionised and becomes adhered to oppositely charged collector cells and this way, they are removed from the outlet airflow.

RECOMMENDED FOR

- Commercial kitchens
- Hospitals
- Use in the agri-food sector
- Factories
(suspended particulate matter and smoke up to 20 mg/m³)
- Fast food restaurants
- Chemical and metallurgy industry

MFE

Filter units without a fan but with high efficiency electrostatic filters

Filter units without a fan but with high efficiency electrostatic filters that are especially designed for cleaning, disinfecting and purifying indoor air at locations containing a high amount of grease or suspended particulate matter.

Characteristics:

- Aluminium profile structure.
- High quality, 25 mm thick acoustically insulated casing made from prefinished sheet.
- Inspection panel for maintenance and filter replacement (minimum recommended opening on the side of 1 m).
- Modular construction for use in combination with different air treatment units.
- Supply voltage 230 V 50 Hz.
- Compatible with most existing aluminium profile type models: CJK/EC, CJK/FILTER/EC, UPC/EC, CJBX/AL, CJBD/AL, CJDXR/AL, UFRX/ALS, etc.
- Washable, anti-grease pre-filter.
- High efficiency (95% ePM₁) electrostatic filter device with built-in thermal sensor.
- Grease-collection trays.
